Corso Lungo  
Perugia  
Italy  
Friday 28th March

Dear Jay,

Thank you for inviting me to stay with you and your family in Egypt for a week. I had a fantastic time, and it was good to see you and your family again. It was also great to be there for the festival of Sham el Niseem, where I saw how you celebrate the first day of spring in Egypt. My favourite thing in the festival was the trip on the river in a pretty little boat. It was lots of fun.

I also enjoyed the picnic by the river with your family. The food was delicious. I liked the pretty, little, coloured eggs that your mum made. It was a perfect day with lovely sunshine and it was great to sit and watch all the people having fun.

I also really enjoyed going to the sea and snorkelling there. The water is so warm and clear in Egypt and I have never seen so many fish before! It was wonderful! I would love to come back to Egypt and do some more snorkelling again. I've sent you three photos from my week in Egypt to remind us of our time there.

My parents and I would like to invite you to a special festival in Italy in October. It is called *Eurochocolate*. I have sent you a leaflet about the festival so you can read about it and decide if you would like to come and visit me at the time of the festival.

I hope to see you again soon.

Best wishes,

**Tim**

Read the description.

### *How planes fly*

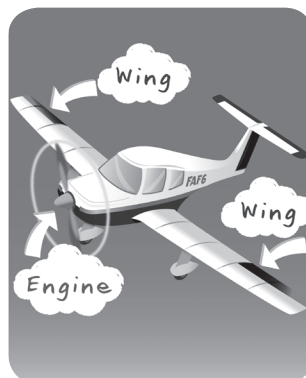

Planes are very big and very heavy, but they can fly through the air with lots of people and suitcases in them. It's amazing! So, how do planes fly?

#### Step 1: Take off

When a plane moves into the wind, its wings cut the wind in half. Some air moves over the plane's wings and some air moves under the wings. The air above the wings moves faster than the air below the wings. This difference in speed makes the plane lift up into the air.

#### Step 2

The plane's engines make it move forward very fast. As the plane pushes through the air, the air moves over and under the plane's wings and keeps it in the air.

#### Step 3

When the plane is in the air, the pilot uses controls to move the plane.

- The pilot can make the plane move left or right by moving the rudder.
- The pilot can make the plane move up and down by moving the elevators.
- The pilot can make the plane tip from side to side by moving the ailerons.
